

PAEROA PRECAST CONCRETE LTD

EFFLUENT TANKS

A quick and effective solution to your effluent storage requirements is our Paeroa Precast concrete panel tank. Built with modular panels the tank can be 47, 70, 95, 110, 145, 190, 300 and 400 thousand litre sizes. The walls are assembled on site, then the base is poured to complete the tank. With a sloping floor and recess to take the pump these tanks empty completely, thus eliminating the common problem of crusting.

The precast effluent tank can be built in most positions and situations. With the increasing trend towards concrete feed pads the precast concrete effluent tank is the complete answer to simple and effective dairy shed waste management. The tanks are completed with a safety fence giving peace of mind and offers the complete solution for all your dairy and environmental requirements.
